

The following are some of the better sources of general information on insects and insect morphology. I have all of these in my laboratory (room 119 of the Biological Control Facility), and you can either read them there or view the readings I have posted on the Evans Library's ereserve system. There is also a Cornell University website that is very good for some aspects of morphology:

http://www.entomology.cornell.edu/Faculty_Staff/Danforth/322LabManual/322Lab.html

Gullan, P.J. and P.S. Cranston 2005. *The Insects, an Outline of Entomology*. 3rd Edition. Blackwell Publishing.

Snodgrass, R. 1935. *Principles of Insect Morphology*. McGraw-Hill Book Company

Dudley, Robert 2000. *The biomechanics of insect flight*. Princeton University Press.

The Torre-Bueno Glossary of Entomology. 1989. Revised Edition of *A Glossary of Entomology* by J. R. de la Torre Bueno. Compiled by Stephen W. Nichols. Schuh, Randall T., Managing Editor. Published by The New York Entomological Society in cooperation with the American Museum of Natural History.

Instant Symposium. *American Entomologist*, Vol. 51, Number 1, pp. 30-49.

Chapman, R. F. 1998. *The Insects Structure and Function*. 4th Edition. Cambridge University Press

DuPorte, E. M. 1959. *Manual of Insect Morphology*. Reinhold Publishing Co.

Grimaldi, D. and M. S. Engel. 2005. *Evolution of the Insects*. Cambridge University Press.

Gould, S. J. 1989. *Wonderful Life. The Burgess Shale and the Nature of History*. W. W. Norton and Co.

You may also want to look at the 2nd edition of *Insects of Australia*. It has some very nice introductory chapters. There are lots of other good books on entomology that are available. Most of them have only a small bit of information relevant to one or two of the lectures, but if you should happen to wander over this way, I would be happy to point them out to you for your reading pleasure.
